MAVERICK SHREEVE

Software Engineer

@ maverickshreeve@gmail.com   📍 Reno, Nevada

SUMMARY

Software Engineer I'm a full-stack software engineer with a strong track record of building practical, scalable solutions across logistics, e-commerce, and consumer-facing platforms. My work ranges from modernizing legacy systems and building internal web tools to launching public-facing apps and websites. I'm comfortable working across the stack-from designing intuitive frontend interfaces in React to writing optimized SQL queries that drive backend functionality. I enjoy translating complex business needs into reliable software, collaborating across teams, and continuously improving systems to support both users and operations.

EXPERIENCE

06/2023 - Present

Reno, United States

Software Engineer
1 Click Logistics

- Developed and maintained over 20 integrations between a proprietary Warehouse Management System (WMS) and major e-commerce platforms, including Shopify, ShipStation, and Amazon.
- Collaborated with the development team to introduce new features and tools within the WMS, supporting over 300 warehouse workers in tasks such as inventory picking, packing, tracking, and employee activity monitoring, significantly improving operational accuracy and workflow
- Wrote complex MySQL queries to extract warehouse data and used it to build intuitive webpages within the WMS using React, ColdFusion, AWS, and JavaScript, enabling real-time visibility into inventory and workforce metrics for improved decision-making

09/2022 - 01/2023

Remote

Full Stack Developer
Integra Contract

- Technologies: Material-UI, Next.js, React
- Developed multiple fully functional webpages using Next.js, React, and Material UI components, integrating dynamic, data-driven interfaces to deliver a seamless and engaging user experience
- Designed and implemented APIs to enable real-time data synchronization across pages, supporting responsive user interactions and consistent content delivery in a full-stack development environment
- Collaborated directly with the founder to build a live stream webpage, incorporating real-time prompted questions to foster dynamic viewer engagement and enhance interactivity with the streamer

05/2022 - 08/2022

Remote

Software Engineer Intern
Merge

- Contributed to the development and successful launch of the Merge App, collaborating on both the beta and production versions to deliver a clean consumer experience
- Designed and implemented custom pages and routing for the mobile application using React, optimizing navigation and enhancing usability
- Developed and integrated custom React animations for the company's website, creating a dynamic and engaging user interface

SKILLS

AWS S3   CSS   GitHub   HTML   JavaScript   Coldfusion   Postman   React   Shopify   SQL   TypeScript

CERTIFICATION

AWS Technical Essentials
